

Chenming Hu is the TSMC Distinguished Chair Professor of Microelectronics in the Dept. of Electrical Engineering and Computer Sciences at the University of California, Berkeley. From 2001 to 2004 he was the Chief Technology Officer of TSMC, world's largest dedicated semiconductor manufacturing company. He was founding chairman of the board of Celestry Design Technologies until its acquisition by Cadence Design Systems in 2002. He is a member of the US National Academy of Engineering, the Chinese Academy of Science, and Academia Sinica. He received the BS degree from the National Taiwan University and the MS and Ph.D. degrees, all in Electrical Engineering, from UC Berkeley. He is a Fellow of the Institute of Electrical and Electronic Engineers and received two of its Field Awards: the 1997 Jack Morton Award for contributions to semiconductor devices and technologies and the 2002 Solid State Circuits Award for the development of BSIM, the first international standard transistor model for IC simulation and used by nearly all IC companies. In addition, Dr. Hu received the 2009 IEEE Junichi Nishizawa Medal for outstanding contributions to MOSFET reliability, modeling, and scaling. He led the development of a novel three-dimensional transistor structure known as FinFET. FinFET received the 2000 DARPA Outstanding Research Accomplishment Award and is expected to extend CMOS scaling beyond the limit of the planar MOSFET structure. He has received more than 100 US patents and has authored or coauthored four books and over 800 research articles receiving many best paper awards including the Paul Rappaport Award for the best paper published in IEEE Electron Devices Society journals in 2002. Among the other awards he has received are the D&D 100 Award, the inaugural SRC Outstanding Research Award, and Sigma Xi Mony Ferst Award. Prof. Hu has supervised 60 Ph.D. students. He also received the 1997 Berkeley Distinguished Teaching Award, the highest honor for teaching conferred by the University of California, Berkeley.
